Conference

National Infant Immunization Week (NIIW) is an annual observance to highlight the importance of protecting infants from vaccine-preventable diseases and to celebrate the achievements of immunization programs and their partners in promoting healthy communities.

In 2019, we are celebrating the 25th anniversary of NIIW. Since 1994, hundreds of communities across the United States have joined to celebrate the critical role vaccination plays in protecting our children, communities, and public health.

NIIW provided an opportunity to draw attention to these issues and to focus on solutions. Communities have continued to use the week each year to raise awareness about the importance of ensuring all children are fully protected from vaccine preventable diseases through vaccination. Today, many immunization programs, partners and communities can celebrate high infant vaccination rates.

2019 NIIW

NIIW, set for April 27-May 4, 2019, will be celebrated as part of World Immunization Week (WIW), an initiative of the World Health Organization (WHO). During WIW, all six WHO regions, including more than 180 Member States, territories, and areas, will simultaneously promote immunization, advance equity in the use of vaccines and universal access to vaccination services, and enable cooperation on cross-border immunization activities.

NIIW 2019 is April 27-May 4, 2019.

POWER TO PROTECT.

Immunization– Measles and Rubella

Clarification of what constitutes acceptable documentation for proof of immunity to measles and rubella for New York State healthcare personnel (HCP).

Acceptable presumptive evidence of immunity against measles includes one of the following: Written documentation of adequate vaccination: Two doses of measles vaccine administered on or after the first birthday and at least 28 days apart or Laboratory evidence of immunity (positive IgG titer) or Laboratory confirmation of measles disease (positive culture or PCR) or Birth before January 1, 1957.

Acceptable presumptive evidence of immunity against rubella includes one of the following: Written documentation of adequate vaccination: One dose of rubella vaccine administered on or after the first birthday or Laboratory evidence of immunity (positive IgG titer) or Laboratory confirmation of rubella (positive culture or PCR)

Ending the HIV Epidemic

ENDING THE HIV EPIDEMIC: A PLAN FOR AMERICA

Diagnose HIV as early as possible

Treat HIV quickly and effectively

Protect people at risk

Respond quickly to clusters of new cases

<https://www.cdc.gov/vitalsigns/end-hiv/>

HIV Treatment is Prevention

Healthcare Providers Can:

- Test patients for HIV. Quickly link people with HIV to care and help them stay in care.
 - Discuss prevention with patients who may benefit from condoms and PrEP.

HealthConnections®

The Health Information Exchange is an invaluable tool for thousands of organizations, from large health systems, to small clinical care offices, and community-based organizations. The Health Information Exchange is the secure flow of patient data among healthcare providers. With a patient's consent, their care team can easily access their electronic medical records including histories, labs, images, reports, diagnostic tests, visit notes, and other vital information necessary to provide the highest quality care. This level of interoperability is crucial for optimal care coordination, and with HealthConnections' services, secure exchange of information is smoother than ever before.

Prevention Agenda 2019-2024: New York State's Health Improvement Plan

The Prevention Agenda 2019-2024 is New York State's health improvement plan, the blueprint for state and local action to improve the health and well-being of all New Yorkers and to promote health equity in all populations who experience disparities. In partnership with more than 100 organizations across the state, the Prevention Agenda is updated by the New York State Public Health and Health Planning Council at the request of the Department of Health.

Prevent Chronic Diseases Action Plan
